Entity governance

Staled devices

Stale enheter kan fortsatt dukke opp i policy-evalueringer og skape falsk trygghet (f.eks. duplikater eller enheter som ikke lenger eksisterer). Microsoft peker på at dette svekker evnen til å styre og støtte miljøet, og at slike objekter forstyrrer generell livssyklus-styring for enheter.

The image shows a Visual Studio Code editor window with a dark theme. The top menu bar includes File, Edit, Selection, View, Go, Run, Terminal, and Help. A search bar on the right contains the text 'GitHub'. The Explorer sidebar on the left shows a file named 'mvp-dagen-2025-demo' with a subfolder 'staled-devices.ps1' highlighted. The main editor area displays the contents of 'staled-devices.ps1', which is a PowerShell script. The script is numbered 1 through 16. It starts with a comment in Norwegian: '# Krever Entra PowerShell (Connect-Entra) og Device.Read.All'. It then runs 'Connect-Entra -Scopes 'Device.Read.All''. A second comment says '# Sett 180 dager som terskel' (Set 180 days as threshold), followed by '\$dt = (Get-Date).AddDays(-180)'. The next comment is '# Finn kandidater: ikke logget på siden terskeldato' (Find candidates: not logged in since threshold date). The script then defines '\$stale' as the result of 'Get-EntraDevice -All | Where-Object { \$_.ApproximateLastSignInDateTime -le \$dt }'. A final comment says '# Grovkontroller, evt. eksporter for review' (Rough check, possibly export for review). The script concludes with '\$stale | Select-Object DisplayName, DeviceId, TrustType, OperatingSystem, OperatingSystemVersion, ApproximateLastSignInDateTime | Export-Csv .\StaleDevices-Review.csv -NoTypeInfoInformation'.

```
mvp-dagen-2025-demo > staled-devices.ps1 > ...
1 # Krever Entra PowerShell (Connect-Entra) og Device.Read.All
2 Connect-Entra -Scopes 'Device.Read.All'
3
4 # Sett 180 dager som terskel
5 $dt = (Get-Date).AddDays(-180)
6
7 # Finn kandidater: ikke logget på siden terskeldato
8 $stale = Get-EntraDevice -All | Where-Object {
9     $_.ApproximateLastSignInDateTime -le $dt
10 }

Administrative roles

Administrative roles are used for granting access for privileged actions in Microsoft Entra ID. We recommend using these built-in roles for delegating access to manage broad application configuration permissions without granting access to manage other parts of Microsoft Entra ID not related to application configuration. [Learn more.](#)

[Learn more about Microsoft Entra ID role-based access control](#)

Authentication in 2025

Phishing-Resistant Methods

Passkeys, Windows Hello, and certificate-based authentication eliminate passwords and protect against phishing.

Conditional Access Control

Authentication Strengths enable role-based access requiring specific secure authentication methods.

Passwordless Onboarding

Temporary Access Pass facilitates onboarding users to passwordless authentication methods efficiently.

×

Governance of PIM

Access Management Tools

Access packages let users request access to groups and applications securely and efficiently.

Access Reviews

Periodic access reviews help evaluate and remove outdated permissions to maintain security.

Privileged Identity Management

PIM provides just-in-time privileged role access with approval and multifactor authentication, reducing risk.

Troubleshooting + Support

New support request

Control your external user lifecycle

Manage the entire lifecycle of external users: configure onboarding approval flows, set up regular access reviews, and remove external users when they're done collaborating. Remove guests from groups and Teams, and even guest accounts from Microsoft Entra ID Governance.

Review common use cases

Manage group membership

Secure and enhance your organization's use of group membership. Make groups "self-service," and delegate approvals directly to business decisionmakers. For privileged access groups, enforce owner eligibility with access reviews.

Review common use cases

Protect resources with role assignments

Require approvals and multifactor authentication to activate use of Microsoft Entra and Azure resource roles. By reviewing roles and making assignments time-bound, you'll help ensure only the right people have access to secure info and resources.

Review common use cases

Audit and create reports

Audit and generate reports on activity within Microsoft Entra ID Governance. Learn whether or not people review access, who's getting privileged access, or flag suspicious activity tied to Microsoft Entra or Azure resource roles.

Review common use cases

Entra recommendations

- New recommendation tab
- Showcase the recommendations and best practices
- Tailored for your tenant
- Some recommendations for Secure Score, but many go's on best practices
- License requirements also shows here
- Go into details and see how to do it and what's affected.

Security Copilot and Conditional Access Optimization Agent

AI-Powered Identity Security

Security Copilot enables admins to manage identities and investigate threats using natural language AI commands.

Automated Conditional Access

Conditional Access Optimization Agent detects policy gaps and suggests or auto-creates report-only policies for coverage.

Improved Security Management

These AI tools streamline threat response and policy management, reducing manual auditing and speeding incident handling.

Conditional Access 'What If' API

Conditional Access 'What If' API

The API allows automation of Conditional Access policy testing in sign-in scenarios, improving deployment safety.

Automation and Integration Benefits

Enables CI/CD integration and scripting to reduce trial-and-error in production and catch misconfigurations early.

▶ BTG Accounts

- **Purpose of Break-Glass Accounts**

Emergency access accounts provide last-resort, time-bound admin control during sign-in or MFA failures.

- **Account Configuration Best Practices**

Create cloud-only accounts with Global Administrator role, avoiding dependencies on PIM and federated domains.

▶ BTG Accounts

- **Authentication and Security Measures**

Use phishing-resistant authentication like Passkeys (FIDO2) or certificate-based authentication to secure accounts.

- **Monitoring and Validation Procedures**

Monitor sign-in logs, set critical alerts, review usage after access, and regularly test recovery and rotate keys.

Quick wins og neste steg

Activate phishing-resistant MFA, block legacy protocols, and setup break-glass accounts within 30 days to enhance security.

Quick wins og neste steg

Deploy Privileged Identity Management for all roles and begin access reviews on critical applications within 60 days for improved governance.

Quick wins og neste steg

Implement lifecycle workflows, activate ID protection dashboards, and migrate service accounts to managed identities within 90days.
